

Dear Sir/Madam,

I am writing to apply for the Software Engineer position at KoBold Metals. I recently completed my Bachelor's degree in Software Engineering at Zambia University College of Technology, and I bring a background in both software development and biomedical engineering, with hands-on experience working in technical, real-world environments.

My experience includes working with backend technologies such as Laravel and Node.js, where I have built and worked on web-based systems and gained an understanding of structuring applications, handling data, and solving practical problems through code. While I am still early in my professional software engineering career, I have developed a strong foundation in programming and system thinking through both my academic work and personal projects.

In addition, my role as a Biomedical Engineering Technologist has strengthened my ability to work with complex systems, troubleshoot issues, and operate in environments where reliability and problem-solving are critical. This experience has shaped how I approach technical challenge analytically, and with a strong sense of ownership.

I understand that some areas in your stack, such as React, geospatial systems, and containerization tools, are areas where I am still developing. However, I am comfortable learning new technologies quickly and have consistently demonstrated the ability to adapt to new tools and environments. I am particularly motivated by the opportunity to work on data systems that support real-world scientific exploration, and I am eager to grow into these areas while contributing meaningfully to your team.

What excites me most about KoBold Metals is the opportunity to work closely with scientists and engineers to solve complex, impactful problems. I am especially interested in building systems that make data more accessible and useful, and I am motivated by the idea of seeing the real-world impact of software in exploration environments.

I am a fast learner, adaptable, and comfortable working in collaborative and dynamic settings. I would welcome the opportunity to contribute to your team and continue developing my skills in a challenging and meaningful environment.

Thank you for your time and consideration.

Yours sincerely,
Raphael Kasuba Mulenga
